SAISON 10

EVERY DAY.
WHEN ONE DAY’S DREAM BECOMES EVERY DAY REALITY...

When we launched Moustache, Greg and myself dreamed of seeing more people on bikes and leaving the car in the garage. We dreamed of sharing the pleasure that we take ourselves every day, on cycle paths, on roads, in the forest or in the mountains.
We dreamed of simply making you smile.

This smile, you have given us a 1000 times! Beyond our ambitions and our hopes. What pleasure we get from reading your messages, from discovering how our bikes sometimes changed your lives. We have often been moved, always encouraged.

Your smiles are our daily motor.

At the time of placing this + Saison 10 + catalogue on your coffee table, give way to your dreams! Dreams of rides, gentle or sporty, alone, with family or friends. Dreams of adventures, dreams of an easy joyful day to day.

This dream can become reality. To smile, every day.

Emmanuel Antonot

LOOKING BACK ON 2020 AT MOUSTACHE...

E-TEAM MOUSTACHE BIKES

Four riders with the same goal: to give the best of themselves on national and international events.

MOUSTACHE AMBASSADORS

Sharing and openness are deeply rooted in Moustache's DNA. Our Moustache ambassadors travel the roads and ride countless singletracks to communicate their passion and generate sales. 😊

A SUCCESSFUL START FOR OUR SAMEDI 29 TRAIL!

The new Sammàd 29 Trail stands out with 3 medals already!

Winner last year with Jérôme Gilloux, it takes gold and silver once again at the French eMTB XC Championship with Natan Petrov stepping next to Jérôme this time. It also becomes the 1st new Vice-World Champion at the eMTB Worlds in Leogang with Jérôme. What a great recognition!

TESTS AND AWARDS

MOUNTAINBIKER: 8-90

“The Samedi 27 Wide 4 is the ideal bike to start in the world of e-bike.”
Score: 8/10

EMTB NEWS: 85

“More riding, more pleasure!” - Award “Trick Offroad”

VELOFRI: 9

“Samedi 28 5 Open
“The finish of the frame is simply splendid...”
“Obviously Moustache nailed it!”

THINK, DEVELOP, TEST, IMPROVE, SHARE... START AGAIN!

What a pleasure to see our bikes stand out in the madness!
WHY MOUSTACHE?

The moustache has been an integral part of the history of the bicycle for a long time now. Look no further than the famous moustache handlebars! Our handlebars are innovative and can be considered as a modern take on the famous moustache handlebars of the past. Every moustache is unique, every moustache is recognizable, every moustache has a strong identity, just like our bikes!

Moustache is the strong belief that e-bikes are an incredible opportunity for the development of cycling. As we see it, they are an excellent alternative to cars. A quality e-bike can bring happiness, whether it’s in an urban environment, on leisure rides, or for more intense riding.

It’s a certain vision of the e-bike. A different, modern, innovative and qualitative vision. It’s the desire to consider the rider as our priority, the center of our thought and development process. It’s the desire to offer bikes that are both unique and rewarding by combining design, comfort and ease of use.

Moustache is also a walk in the park for learning to ride. It’s the only bikes without electric pedal assistance. But for us, it’s one of the most important bikes in our collection. It’s the first bike, the one that will ignite a passion in the young of riders!

Moustache is a structured collection with 14 families to cover all the different riding needs: urban, all road, road, mountain bike and kids’ bikes, so you can find the right Moustache for you!
Moustache is based in the Vosges region of France, home to our childhood memories, our families, and our values. We strongly believe that the strength of a company is based above all on its employees, and we’ve built ours around our complementary skills. After starting out as two bike-lovers crazy enough to embark on such an adventure – Manu (development) and Greg (sales) – we now have close to 140 people working on the development and production of our bikes.

THE COMPANY

A 100% ELECTRIC BRAND!

E-bikes as a solution for the future? At Moustache Bikes we believe this, for 10 years this conviction is what drives us and motivates us every day to develop innovative products! To this day Moustache has created over 140 direct jobs! And in the end, this is what we are most proud of! These 140 people who get up every day to develop and construct the best possible bikes, our only reason for being, that which motivates all our teams.

The 1st of January 2019 marked a new page, our little factory in the Vosges moved to a new bigger site in order to offer a better working environment, that’s more modern and more fulfilling. This new infrastructure also enables us to increase our production capacity in order to respond to the growing appetite for e-bikes. Looking to bring always more added value and local know-how in our bikes, our teams work tirelessly to improve our quality process and our production tools. A new line of production for our Moustache wheels came to light in 2020 in order to master the quality of our products from start to finish, and above all to create expertise in this profession locally.

We hope that you will feel the passion that we put into the development and the production of our bikes when you get behind the handlebar of a Moustache, for a simple test or to accompany you every day. Nothing would be possible without the trust of our partners, suppliers, stockists and of course our users! Once again, thanks to everyone!!
A NETWORK OF QUALIFIED DEALERS

We would be delighted to see you also wear the Moustache, so if you would like more information on one of our products, don’t hesitate to visit one of our local dealers! They will be able to advise you and help you choose the bike that suits you!

What’s better than a test to make up your mind? We can talk for hours but nothing replaces a test! We therefore invite you to plan a test ride by contacting your local Moustache dealer.
OUR FRAMES

Whether it is for urban, hybrid, road, MTB usage or a child, Moustache offers a structured range of 14 families covering all needs with a wide choice of parts and of prices. All our models correspond to a usage depending on your needs, but all equally possess the ingredients which make up the DNA of our bikes: a high end frame, that’s stiff and reassuring to provide a safe and dynamic ride, a comfortable position, a Bosch motor with economical energy use, natural, supple and powerful, a large autonomy thanks to the 400 to 625Wh batteries and practical accessories. Our only objective is to see your face lift up with a wide smile and to know you are taking pleasure in munching up the kilometers.

All this is signified by our logo “Smiling Machines”!

The most important part of a bike is its frame and we therefore pay very special attention to its conception.

We want to offer frames that are open and accessible! Open to offer a natural and comfortable riding position and accessible to open up riding to as many as possible.

Here are several characteristics you’ll find in all Moustache bikes:
- Geometries that always favor a bike that’s agile and easy to use from the start.
- Usage of aeronautical quality hydroformed aluminum 6061 T4, T8 tubes with varying thickness offering dynamism and comfort.
- A discreetly integrated Bosch motor and battery, lowering as far as possible the bike’s center of gravity, offering great stability.
- Two versions for some models, a “Standard” version and an “Open” version offering a low step-over frame, in order to make our bikes more accessible.
- And for a beautiful finish, double TIG welds that are polished everywhere it’s possible.

NICE FRAME !
WE COULD DISPLAY IT ON THE WALL,
BUT WE DESIGNED IT TO BE RIDDEN ;-(D
BOSCH INTEGRATION
IT’S PARTLY THANKS TO THIS THAT YOUR RIDES BECOME SO FANTASTIC!

To obtain the best possible riding behaviour from our bikes, we use three different technologies. Each of these enable a discrete integration of the motor and the battery.

HIDDEN POWER TECHNOLOGY
For this project, the challenge was not only to integrate the battery, but also to minimise the volume. We had to optimize each angle, each fillet, each millimeter. We had to push past the limits of hydroforming techniques by increasing the pressures beyond what’s possible in order to create each cm² of tube: the result was increased stiffness and a perfect integration of the battery, giving it also a highly finished look. The frame conception and in particular that of the down tube bring great stiffness and strength to the frame. It’s thanks to the sides and edges of the tube as well as the optimized cutting, reduced as far as possible, that we obtain this positive result.

You will find Hidden Power technology on our Friday 28, Dimanche 28, Dimanche 29 and Samedi 28 Off models.

INTEGRATED POWERTUBE TECHNOLOGY
The hydroformed tubes house the battery aesthetically, minimizing volumes to achieve a sleek look. Specific work was carried out to position the battery as low as possible. The battery is therefore placed close to the motor to guarantee an extremely low center of gravity, assuring a dynamic ride.

By associating triple cavity tubes with our Integrated Powertube technology, we were able to increase the stiffness of our frames even when removing the top tube from carbon models in order to offer an “Open” version. This enables us to make frames that are even lower and wider open, which means that it is even easier to get an end off the bike. We have also simplified cable routing for easier maintenance.

The Bosch Powertube battery is available in vertical or horizontal versions depending on the motor. The vertical version of the Powertube enables the frame to be reinforced with a triple cavity tube and an easy access to the battery which can be removed from the top of the frame. The horizontal version available with the Bosch Performance CX motor is removed from the underside of the frame, enabling a more refined silhouette for the bike, and a perfect balance of weight close to the motor.

The Bosch Powertube 400/500Wh & 625Wh batteries are not the same length... Not a problem, we have created a Moustache adaptor so that you are able to change between these two models. This adaptor permits an easy change between batteries of the same type (horizontal or vertical), and to change without problem from a 500Wh battery to 625Wh for example. Therefore the batteries available for the Powertube are compatible with 400, 500 or 625Wh batteries. A little plus, the specific form of the adaptor permits an easier hold on the battery while manipulating it.

The Integrated Powertube technology is on all our E-MTBs, Lundi 27, Samedi 28 SCX, Samedi 28 SL, Samedi 27 Xroad and Xroad FS, as well as on the Friday 27 FS Speed.

INTEGRATED MAGNET AND CAPTOR
FOR PRECISE SPEED DATA!

On some models, we have developed a specific frame dropout that enables the integration of a speed sensor. Functioning with the magnet that is mounted directly on the rear disc brake, this solution avoids any relocation or loss of the magnet, and guarantees more precise speed data. Discrete and efficient.

BOSCH DUALBATTERY TECHNOLOGY
To equip our new Weekend with the Bosch Dualbattery technology, we have worked on the frame by replacing the top tube with a new version, offering the necessary space to house 500Wh motors. We have slightly modified the steering angle and optimized the position of the center of gravity so that our Weekend 27 FS offers you a ride that is fun, dynamic and precise, even with an extra battery!

The photo on top of the page shows the Powertube battery as close as possible to the motor frame for the best possible balance.
If we’ve chosen to exclusively use Bosch motors, it’s because of our convictions! We strongly believe that performance, quality and service are part of the necessary basics. Our association with Bosch is based on sharing these same values. Today, Bosch is the most accomplished and high performance system on the market... and it’s produced in Europe! An overview of the technologies used.

> SYSTEMS

**ACTIVE LINE PLUS**
Supple, economical and progressive. Ideal for daily urban usage.

Pure riding pleasure! The Bosch Active Plus motor, ultra natural, quiet, light and reliable ensures cyclists enjoy riding even more. The maximum torque can reach 50Nm offering a progressive acceleration and ideal assistance for town & city riding or gentle trips out.

The absence of friction enables riders to easily pass the limit of 25km/h where assistance cuts out without even realising it! Simply amazing!

**PERFORMANCE LINE**
Sporty and natural, it will surprise you with the absence of friction.

The Performance Line motor is the most versatile Bosch motor system: whether it's for riding across fields at speed, to get to work, or for a relaxing trip out to recharge and reboot, it always offers the right level of assistance at the right moment. Reliable, quiet and elegant, it guarantees comfortable pedaling up to 25km/h and incredibly high performances, the motor brings just the right touch of assistance always at the right moment, even in the mountains.

**PERFORMANCE LINE CX**
Compact, light and powerful.

No trail is too steep, no challenge too tough: the Performance Line CX motor is made for anyone who feels that trails are their second home. The most powerful Bosch motor, destined for demanding cyclists, is distinguished by its lightweight, its compactness and by its minimal resistance to pedaling. In eMTB mode, the rider always has the necessary power at any given moment. The Performance Line CX motor has incredibly impressive acceleration, reacts without delay and will convince you with its agility and even further improved control. With up to 340% of perfectly managed assistance it allows MTB aficionados to push riding pleasure to the max.

**PERFORMANCE LINE SPEED**
Fast and dynamic.

With a maximum torque of 85Nm and a light weight at just 2.9kg, this motor will take you easily and safely up to 45km/h, offering assistance of up to 340%. High speeds are achieved rapidly and fluidly; the perfect solution to cover long distances easily or reduce the time of your day to day journeys.
PURION
Compact and efficient
The compact control on the bars is both screen and operating unit. Ideal for anyone who wants to concentrate on the essential information. You can clearly see the amount of charge remaining, the speed, the riding mode, the autonomy, the distance ridden and total distance. The Purion console allows you to fully concentrate on what’s around you: the backlit anti-reflect screen benefits from optimal readability at night as well as in strong sunshine.

INTUVIA
Clear and intelligent
Intuvia offers optimal user comfort. Its usage is intuitive and the screen offers excellent readability, even in sunlight. Therefore, you can always keep an eye on all the riding data. Intuvia will give you very precise information on your speed, the distance ridden, the length of time you’ve been riding and the current autonomy. Intuvia can also be used with your left thumb in an optimal way using the separate control on the side.

KIOX
Sporty and connected
Kiox is a new console made for ambitious sporty cyclists. It has all the classic functions of a cycle computer, while opening a gateway to the digital world for e-bikers thanks to a smartphone application. The ride data is constantly visible on the color screen and thanks to the separate control on the side the rider always has both hands on the handlebar and the screen in view. Kiox registers journeys and also sends all important data to the online portal eBike Connect, via a smartphone connected with Bluetooth. Kiox is now the ideal companion for every outing.

SMARTPHONEHUB
Intelligence on your handlebar
The SmartphoneHub transforms an electric bike into a fully connected e-bike which participates in the digital world: thanks to a smartphone and the eBike Connect App, the SmartphoneHub becomes an intelligent command center which navigates, registers activities and can be connected to other services and applications. More security, more comfort and more enjoyment during your different rides. A whole new dimension to cycle mobility.

NYON
Polyvalent and shrewd
With the new Nyon, it’s time for an entirely connected adventure. Via the eBike Connect App, Nyon is connected to your smartphone and shares data on your itineraries and activities. With its color screen, this intelligent guide assists the user of an e-bike to explore unknown places and provides him/her with data on physical form to help with ongoing training. Thanks to the touch screen, you can use the onboard computer in a simple and intuitive manner whilst riding. It can be controlled via the separate side controller. For long rides or for short daily rides, with this robust and easy to see screen, you are perfectly equipped to face any demand, at any time.

Conditions of use can be consulted on www.bosch-ebike.com
POWERPACK
These lightweight lithium-ion batteries are easy to install and to remove. Our Hidden Power integration technology even enables elegant and efficient integration of the PowerPack battery. And thanks to its charging point, the PowerPack can also be charged directly on the bike. Easy to swap and transport, the PowerPack is a safe bet for anyone wanting a simple lightweight system.

POWERTUBE
With the PowerTube, Bosch offers a battery that can be integrated optimally into the bike frame. In two different versions: the Horizontal Powertube or the Vertical Powertube, for a perfectly designed integration and dynamic look. Benefiting from power up to 625Wh, the battery is invisible and perfectly protected by the frame. The exclusive Moustache battery holder is able to further reduce the bulk in the frame, to lower the center of gravity, and guarantee maximum security. When unlocked, the battery unit slips and pulls out around two centimeters from the frame in order to grasp it intuitively. Moustache have also designed and developed an extension for 400 and 500Wh Powertube batteries (that are shorter than the 625Wh). This extension makes handling easier and enables the use of different batteries in the same bike, ingenious.

DUALBATTERY
Do not limit your ride. DualBattery is the perfect solution to make your riding adventures longer. The combination of two Bosch batteries in our Weekend range offers a capacity of 1 125Wh of autonomy. During both the charge and usage, the system transfers intelligently between the two batteries. Therefore, the two batteries are charged and emptied in a homogenous manner, which considerably increases their lifetime. Depending on your preferences, just one battery can also be used.

AUTONOMY
Autonomy is extremely variable. It is influenced by many parameters: the type of engine, battery, bike, position, user weight, elevation, type of terrain, wind, trees, gear shifting management, etc. The data validated in laboratory are sometimes distant from the real conditions. Bosch has therefore developed a very precise simulator that can calculate the autonomy of your bike according to all these parameters and your use. Perfect to choose the capacity of your battery when several options are available.

You can find this simulator at: moustachebikes.com/en/autonomy
LUNDI 27
On the Lund 27 we kept this iconic and eminently practical handlebar on the most urban of our bikes. Its riding position offers a wide angle of vision that’s ultra practical to sweep control over the surrounding traffic or admire the beauty of the landscape! And what to say of its ergonomics, straight back and natural hand position which offer unparalleled comfort.

SAMEDI 28
Samold 28 uses a version of the Moustache handlebar that’s a little lower to give a balanced position particularly suited to long rides. For this Seasons’ 10 all our Samold 28 benefit from the raised version, praised for its comfort.

FRIDAY 27 FS SPEED / SAMEDI 27 XRoad
For the Friday 27 FS Speed and Samold 27 Xroad, the Moustache bar is more sporty and curved. Its semi-raised ergonomics is very comfortable and offers a wide range of usage. On the Samold Xroad range, the height of the handlebar can now be adjusted to better adapt to everyone’s needs.

FRIDAY 28
Friday 28 benefits from the ingenious Fleeber handlebar, developed with our friends at Baramid. Their technology filters out irregularities of the ground and any vibrations just as a wide volume air tire would. Coupled with the ingenious Quick-Park stem which enables you to turn the handlebar by 90° with one turn of the hand to use space, your Friday 28 will be able to easily squeeze between others in a bike park or make itself unnoticed in a narrow corridor... practical!

HANDLEBARS

Ah yes the famous Moustache handlebar... the basis of everything! Invented by our ancestors, we updated it to today’s tastes and offered it a brand new design while reinforcing its legendary comfort thanks to a very natural hand position. We developed more than four different versions, with little variations of angle each time until we found the perfect shape. It’s rise from Aluminium 6061 tubes, just like our frames, and it has the same thermal treatments as them for maximum strength.

Samed 28 XRoad 7
Quick-Park stem on Friday 28.5
Lundt 271 Black

Samed 28
A special attention was paid to our road handlebars. The objective was to have a position that was both ergonomic and comfortable to take on long rides without accumulating fatigue. For this we added a light backsweep on the upper part of the bar in order to have more open shoulders than on a standard road bar. In complement, we also worked on the flaring as well as the height in order to obtain a position on the lower part of the handlebar that is more comfortable. You can therefore take as much enjoyment in climbing as in descending, which is a philosophy very dear to us at Moustache. You will never want to ride with another handlebar! 😃

In the same spirit as our road handlebar, a gravel version was conceived, bringing even more polyvalence and stability to the bike, notably on trail use. For this the flaring was accentuated for a perfect hold and handling that is both precise and not tiring. And since our bikes invite you on adventure, we widened our bars in order to offer more serenity and a perfect control for those who want to attack on the most demanding terrain.

The position of your hands has a huge impact on your comfort and pleasure when riding. This is particularly true for MTBs. We have therefore designed three handlebars in thermally treated Aluminum 6061 that benefit from an ergonomy adapted to each riding style:

For gentle rides and outings (Samedi 27 Wide and Weekend): with its 740mm width, it brings a comfortable riding position and precise handling to weave through everywhere, even in the densest forests.

For All Mountain riding (Samedi 29 Trail): 760mm wide to even better control the bar when the countryside passes by quicker and quicker, but always as comfortable thanks to a geometry favoring comfort and a natural wrist position.

For Enduro... (Samedi 29 Game): 780mm wide to put you in the attack position whilst managing the beast in any situation.

MTB HANDLEBARS
ROAD HANDLEBARS
GRAVEL HANDLEBARS
LUGGAGE-CARRIERs

Our Moustache luggage carriers developed specifically for our bikes offer several mounting systems in order to guarantee compatibility with numerous accessories.

QL3 SYSTEM
The distinctive feature of this system specially created for urban usage, rests in the fact that the essential components for mounting panniers are found on the bike’s luggage racks. The load is therefore more comfortable to carry since the back of the pannier is free from all protruding attachments. This mounting standard means that you can attach in just one simple move the waterproof Moustache panier that’s made in Germany by Ortlieb. The QL2,3 attachments can also be unscrewed very easily in order to adapt and attach any other Ortlieb panier or standard accessory on your luggage racks.

MIK SYSTEM
This system developed by the brand Basil enables you to securely fix MIK compatible accessories in just one click on your luggage rack platform, as well as standard accessories that you can also adapt up to 25 kg. The comfort of usage, its ease to mount several types of accessories on the bike, and its compatibility with several brands makes the MIK system a super ally in your daily travel.

MIK HD SYSTEM
This evolution on our latest luggage racks (1 und 27) is now approved up to 27 kg, enabling you to install in one click the Urban ki compatible child carrier, or even to load your mule with any type of Luggage (+D)

MUDGUARD
At Moustache, we don’t like mudguards… They’re never properly centered, they move all the time, they’re rarely nice to look at… We therefore decided to innovate and create our own mudguards! The exclusive Moustache mudguards are tubular, therefore very stiff, whilst still being lightweight. And they are concave with the wheel, which looks a lot better.

We developed three exclusive extrusion profiles. The bars are lined up then curved to adapt to the wheel circumference. A mudguard may seem simple, but this was a very complex development. In any case, the effort was worth it.
MAGIC GRIP CONTROL REAR SHOCKS

Behind this name are hidden many years of riding, testing, intensive hours of development in order to finally get to this magic moment when everything functions perfectly. We needed an umpteenth version of our piston that controls the rebound on our shock to finally obtain the level of friction needed to give the impression that an extra hand is pushing you the desired Perfect harmony between the suspension and the motor, therefore avoiding the “ping” in assistance when the suspension sags excessively, and guaranteeing unbelievable motor function. MAGIC, we said it -D

A MULTI-FACETED SHOCK

Similar on the outside, our Magic Grip Control shock is offered in 4 versions which are subtly different inside to adapt perfectly to each riding style and in order to balance as well as possible our chassis according to the front suspension used or wheel size!

Friday 27 FS Speed / Samedi 27 Xroad
100mm of travel and a smooth functioning that gives the impression you’re riding a flying carpet! Sensitive on small shocks to bring comfort and protect your back from bad vibrations, it smooths out bumps on the ground to make your rides more fluid.

Samedi 27 Wide / Weekend
This version offers you 120mm of travel, that’s perfectly used! Ultra sensitive, the shock offers comfort and grip on all terrain, with disconcerting ease. And how amazing to feel big shocks gently cushioned with this feeling that it’s always there for you!

Samedi 29 Trail
So many changes for our 2021 Trail! A new balance, 29” wheels and the formidable efficiency of the new Fox forks have driven our Magic Grip Control shock in its 150mm version to re-invent itself to offer ever more high performance, all whilst keeping its “Smiling Machine” soul! Comfortable and easy, it still offers the feeling that there’s a helping hand on your back pushing you up the most difficult climbs.

Samedi 29 Game
It’s not easy to achieve the same level of performance when we’re working with the new Fox 38 fork! And yet, the Magic Grip Control 160 mm shock manages to guarantee an optimal balance for the bike in tackling obstacle after obstacle, to keep it grounded even on the steepest climbs and to guarantee rear wheel grip when climbing and descending, offering the Game a staggering level of performance!

Benefiting from a Twinch standard mount, the air volume of our shocks could therefore be increased and the upper attachment is now mounted on bearings. This results in better sensitivity on small shocks and more progressivity in order to keep an extremely dynamic ride.

Our objective was to guarantee an optimal balance for the bike in tackling obstacle after obstacle, to keep it grounded even on the steepest climbs and to guarantee rear wheel grip when climbing and descending. In fact, depending on the intensity of shocks, instead of passing only via the rebound needle, the oil pressure will more or less open the high speed circuit valves and dynamically regulate the rebound. It results in a more constant pressure of the tire on the ground giving insane grip for the rear wheel, when climbing and descending. The oscillations of the bike are better managed, it is more balanced and the grip for the front wheel is far improved.

The circulation of oil generated enables evacuation of heat, to maintain a reasonable functioning temperature and optimal work by the shock.

Behind this name are hidden many years of riding, testing, intensive hours of development in order to finally get to this magic moment when everything functions perfectly. We needed an umpteenth version of our piston that controls the rebound on our shock to finally obtain the level of friction needed to give the impression that an extra hand is pushing you the desired Perfect harmony between the suspension and the motor, therefore avoiding the “ping” in assistance when the suspension sags excessively, and guaranteeing unbelievable motor function. MAGIC, we said it -D

A MULTI-FACETED SHOCK

Similar on the outside, our Magic Grip Control shock is offered in 4 versions which are subtly different inside to adapt perfectly to each riding style and in order to balance as well as possible our chassis according to the front suspension used or wheel size!

Friday 27 FS Speed / Samedi 27 Xroad
100mm of travel and a smooth functioning that gives the impression you’re riding a flying carpet! Sensitive on small shocks to bring comfort and protect your back from bad vibrations, it smooths out bumps on the ground to make your rides more fluid.

Samedi 27 Wide / Weekend

Comfortable and easy, it still offers the feeling that there’s a helping hand on your back pushing you up the most difficult climbs.

Samedi 29 Game
It’s not easy to achieve the same level of performance when we’re working with the new Fox 38 fork! And yet, the Magic Grip Control 160 mm shock manages to guarantee an optimal balance for the bike in tackling obstacle after obstacle, to keep it grounded even on the steepest climbs and to guarantee rear wheel grip when climbing and descending, offering the Game a staggering level of performance!
MTB
In E-MTB, the wheels need to be dynamic and high performing but also able to accompany you for many years. This is why we have designed and produced our own Just_Moustache rims using aluminum 6061-T6 that’s ultra strong. Welded and thermically treated, they are then micro glass-bead blasted to increase their strength and their lifetime. The sides are specially reinforced to resist possible impacts and their asymmetric profile enables us to achieve homogenous tensioning between the 2 sets of spokes, guaranteeing greater stability and improved dynamism. And so you can ride serenely, our wheels are mounted Tubeless, all you need to do is add Tubeless sealant. The Shimano hubs with cartridge bearings help to reduce friction as low as possible, always with the aim to improve dynamism and performance!

WHEELS
Since the beginning, we have been convinced that a good e-bike is not just about the frame and motor. Each part participates in the overall efficiency and if some parts are not at the right level, can have a huge negative impact on the performance. Wheels are probably the best example. It’s out of the question to lose even one watt of power because of a pair of wheels that are not up to the job. We have looked deep into the subject and tested a huge number of wheels on the market without much success, because none of them were perfectly adapted to our e-bikes. We have therefore created our own wheels and enhanced them over the years, for ever more dynamism and efficiency. Discover our different models.

SAMEDI 27 WIDE/ WEEKEND: asymmetric wheels Just_Moustache aluminum 27.5+
Specifically conceived for the Maxxis 27.5x2.8 tires that we chose during our tests, the Just_Moustache aluminum rim in 27.5+ uses an internal width of 35mm, offering the best balance to keep a “balloon” tire that doesn’t penalize steering or control when leaning.
Therefore, the ride stays perfectly natural and dynamic! Just_Perfect!!!

SAMEDI 29 TRAIL/ GAME: asymmetric wheels Just_Moustache aluminum 29"
As with our 27.5+ rim, we specifically designed her big sister for the Maxxis Assegai 29x2.50 tires used on our Trail and Game ranges. This time we opted for an internal width of 31mm to match perfectly with the 2.50 tires. The 2.50 section brings incredible precision and the 29" size offers huge capabilities for passing obstacles and learning into turns whether you’re a novice or experienced rider!

SAMEDI 29 TRAIL 10 / GAME 10: asymmetric wheels Just_Moustache carbon 29"
Using the high resistance Toray T700S carbon fiber technology, the Moustache "Universal" 29" rim is designed to fulfill the expectations of the most demanding riders. The carbon rims bring stiffness and dynamism to the whole. Their capacity to find their original form after a shock ensures smooth transition stays constant. Nothing less would do to free the power of our Trail 10 and Game 10!
URBANS / HYBRIDS

Our urban and hybrid bikes, even if they are not destined for competition, also benefit from our latest developments in wheel technology. The Just_Moustache technology, created for MTB has been declined into a lighter, but just as well performing version in order to offer a dynamic ride.

The double walled Aluminium 6061-E rims are welded and thermically treated, then micro glass-bead blasted to increase their strength and their lifetime. As on our MTB we use an asymmetric profile to gain homogenous tensioning between the 2 sets of spokes, the dynamism is improved, and above all the stability is reinforced so you can ride safely.

The Just_Moustache technology is used on the different models in our Lund27, Friday 28, Friday 27 FS Spaced, Samedi 28, Samedi 27 Xroad and Samedi 27 Xroad FS families.

ROAD / GRAVEL

Our Moustache wheels were conceived so that you could ride confidently, with speed, stability and control. You can also count on Tubeless compatibility and the possibility to use wider tires if you wish.

The CNC aluminum hubs with cartridge bearings ensure long life and smooth functioning.

The thru-axle dimensions are 12x100mm at the front and 12x142mm at the rear. They guarantee maximum stiffness whilst enabling fast mounting and dismounting.

Moustache al:30 wheels

Our Moustache al:30 wheels pass a milestone in sporting capacity with their rim height of 30mm. Conceived in Aluminium 6061-E and thermically treated, they have 24 triple butted spokes for a super ratio of weight and performance.

Moustache c:45 wheels (on Dimanche 28.7)

Our Moustache c:45 wheels in lightweight carbon are the modern incarnation of wheels for disc brakes. Conceived in high resistance Toray T700S carbon with a height of 45mm, aerodynamics, comfort and dynamism are brought together in an explosive cocktail. Also built with 24 triple butted spokes for a super ratio of weight and performance, the carbon rims bring stiffness and dynamism to the whole.

LUNDI 27

To leave the car in the garage, on Monday morning, and every other day of the week!
Lundi 27, new icon!

The Lundi is the very first Moustache bike that we designed. We wanted to make it pretty, comfortable, practical, different and above all easy to use. This new version for season 10 takes all the fundamentals and further improves on them.

THE FAMOUS MOUSTACHE HANDLEBAR

The Moustache handlebar on our Lundi, that’s so recognisable, is very high-riser. It therefore offers a very safe upright position to give you a full panoramic vision of your surroundings. The cables are integrated and it is possible to fix an adaptor for a basket on it.

PRACTICAL!

« HOP »

The open frame enables very easy step-over on the bike.

« CLOC »

Your compatible panniers or baby carrier is solidly locked on in an instant to the rear luggage rack via the MIK HD system that’s able to carry 27kg!

« CLICK »

The Moustache by Ortlieb bag is installed in 3 seconds thanks to the luggage rack equipped with integrated QL3 supports.

« CLACK »

The lock below the seat-stays enables you to secure your bike in an instant for a quick errand. And if you need to leave your Lundi 27 for a long period, the optional Axa chain allows you to easily attach it to a fixed point.

AND EVEN 2X+ PRACTICAL

The optional front luggage rack is also equipped with the MIK system. Super practical to fix a second basket in an instant or if the rear rack is occupied with a baby seat. (avoid at night so as to no reduce the efficiency of the front light).

REASSURING!

The integrated LED lighting, positioned high up, enables you to see and be seen in every circumstance. And if you need to stop the machine in an instant, there’s nothing better than the hydraulic Shimano disc brakes, that are powerful and progressive!

TUBULAR MUDGUARDS

A Moustache innovation, the exclusive ultra-solid Moustache tubular mudguards, will always look after you, perfectly centered on the wheel to protect you whatever the weather.

Lundi 27 takes care of you!

Easy to handle, precise, stable, comfortable and reassuring thanks to its innovative triple cavity frame which now integrates the Bosch Powertube battery. It is ultra stiff laterally to guarantee stability and safety, but it is sufficiently supple to protect you from irregularities on the ground, helped along by its large air volume tires in 27.5x2.4. Those tires, now even larger and more comfortable, also ensure you will not get your wheels trapped in tram rails, and have anti-puncture reinforcements.

As soft as you could wish for, the Royal Wave or Royal Hertz saddles will know how to preserve the sensitive parts of your anatomy :-)

MOUSTACHE - SAISON 10 / 41

Lundi 27, new icon!
To start the week off well!

**LUNDI 27.1**

EVERY DAY.

WEAVE ABOUT.

Friday 28 has got rid of any excess, keeping only what’s essential to get you about quickly and enjoyably!
Friday 28 is sporty and urban!

With its pared down look and sporty character, this urban ride will not pass by unnoticed. As at ease weaving between cars as it is making its way up to a third floor apartment without a lift, it’s your ideal choice for getting about the urban jungle and making daily life easy. Further, higher, faster, stronger!!!

TOTAL INTEGRATION

FOR A REFINED LOOK!

More refined than ever thanks to its conception around the Hidden Power technology, the Friday 28 has also seen its center of gravity lowered, enabling you to go ultra-fast in town. It’s easily capable of riding above 25km/h!

STIFF FRAME

AND CARBON FORK

FOR A SPORTY FEEL

The Friday 28 Aluminum hydroformed frame and its carbon fork bring it both rigidity and a dynamic ride. The best for accelerating away from red lights and weaving between cars!

BOSCH MOTOR

On the Friday 28.3, the Bosch Active Plus motor is ultra soft and silent. On the Friday 28.5 and 28.7, the Bosch Performance Line motor will surprise you with its lack of friction. In any case, you’ll pass the 25 km/h limit without even realizing it!

MINIMALIST, BUT ALSO PRACTICAL

AND COMFORTABLE!

Just because we’ve removed everything that’s superfluous, we shouldn’t find ourselves lacking! The Friday 28 is comfortable with its Flexbar handlebar, manufactured in France by our friends at Baramind, which filters vibrations in the same way a wide tire would. And we wouldn’t do without the Quick-Park stem which enables us to put the handlebar at 90° in just a few seconds! Super practical when we need to leave our Friday in a corridor for example! Same thing for the QL3 light luggage rack which enables us to click on Moustache by Ortlieb panniers in seconds. The tubular mudguards and powerful lights bring protection and safety, without forgetting the Brooks saddle for style and comfort!

RIDE CONNECTED

You’re always online? The Friday 28 is too, thanks to the Bosch SmartphoneHub which enables you to connect your bike to your telephone!

EVERY DAY

FLY BY.
Friday 27 FS Speed speeds things up!

At Moustache Bikes we are convinced that your bike trips can also be synonymous with efficiency, without sacrificing anything to pleasure. The Friday 27 FS Speed is part of a new generation of bikes, the Speed bikes.

URBAN, SPORTY AND COMFORTABLE
Having to live our hectic lives we dream of being able to shorten the distances and to control time; we want to go both further and faster. At Moustache Bikes we are convinced that your bike trips can also be synonymous with efficiency, without sacrificing anything to pleasure. The Friday 27 FS Speed is part of a new generation of bikes, the Speed bikes. Capable of traveling at 45 km/h and beyond, our Friday 27 FS Speed not only brings a good dose of fun and speed to your daily trips, it allows you to do it safely.

A GOOD REASON TO LEAVE THE CAR IN THE GARAGE
Friday 27 FS Speed offers an excellent alternative to public transportation or combustion-powered vehicles for your daily trips! Do you live on the outskirts of the city, in the countryside, or do you simply have to ride long distances every day in a limited time while wanting to leave the car in the garage? The solution to this type of mobility probably is the Speed bike. If everyone is convinced of the usefulness of bicycles and electric bikes, beyond a certain distance to cover, users are looking for a means of transport faster than a e-bike in order to travel longer and ride safely. Our Friday 27 FS Speed perfectly meets these requirements regardless of age or physical condition. And that’s not even to mention the sensations when you travel by bike at 45 km/h!

DRIVE FAST AND RESPECTFULLY
Riding on a Speed bike offers new possibilities but also implies some safety rules to be strictly respected. The Friday 27 FS Speed meets the L1e regulation in accordance with European regulation 168/2013, but beyond this standard, the purchase of a Speed bike implies certain obligations such as the requirement to have proper insurance and the need to wear a helmet that meets legal Speed bike requirements.

VERSATILE.
Samedi 28 is one bike for everything!

Behind its emblematic Moustache handlebar, you’ll ride as in days gone by, as a family, for a gentle pootle, for fitness, with class, in the town, on country lanes, on paths, taking your time or at speed, just a little or for a long time!

**SAME DI 28 IS ELEGANT!**
With a lower top tube for ease of use, the Samedi 28 is both comfortable and dynamic. Its very individual style is chic with its characteristic Moustache handlebar that won’t go unnoticed, and it’ll quickly become your ideal companion for going to work in the week and for getting about at the weekend! Thanks to its center of gravity that’s been lowered further, the Samedi 28 is a model of balance. It is available in Standard or Open versions.

**FRAME WITH EXCLUSIVE POWER TUBE INTEGRATION**
Its compact frame with total integration of the Bosch PowerTube battery enables this very open version of the Open, with an even lower and easier step over. Its triple cavity construction gives the frame optimal stiffness.

**BOSCH MOTOR**
On the Samedi 28.2 and 28.3, the Bosch Active Plus motor is ultra-natural and silent, ensuring a pleasurable ride! On the Samedi 28.5 and 28.7, the Bosch Performance Line motor, sporty and natural, will surprise you with its lack of friction.

**COMFORT**
The wide volume Schwalbe 700x23C tires give a feeling of comfort and security, acting like a natural suspension. They’ll take care of you!

**THE LITTLE EXTRAS**
Thanks to its legendary Moustache handlebar, the Samedi 28 offers you a natural and comfortable position. The Axa security lock integrated into the frame enables you to easily secure your ride for a short stop and the extra-solid painted mudguards will protect you in any weather!

Samedi 27 Xroad is the bike that can do it all!

This morning I’m going to work by bike. At lunchtime I’ll use it to do some shopping. This evening I’ll ride home via the forest, and this weekend it’s a ride in the mountains! Yes, yes, all that with my Samedi 27 Xroad! Magic!!!

Thanks to its dynamic frame and choice of parts, it combines the capabilities of an urban bike and a MTB.

AT THE CROSSROADS
With the optimized geometry, the compact frame and lowered center of gravity, our Samedi 27 Xroad is as at ease in the town as in the country, on cycle paths or on the road. The Xroad is the SUV of electric bikes, as versatile as it is high performance, whatever the terrain it’s on! It’s suited to all types of usage, can become more sporty, but always stays practical!

YOU’LL FIND THE RIGHT SHOE FOR YOUR FOOT!!!
The Xroad family has lots of offerings and various motor options.

On the Xroad 1, the very natural, economic and quiet Active Line Plus. On the Xroad 2 and 3, the Bosch Performance Line, sporty and natural, will surprise you by its absence of friction. On the Xroad 5, 7 and all Xroad FS, the Bosch Performance Line CX is the most powerful in the Bosch range. Compact and light, it is distinguished by its minimal resistance to pedalling. These uncontestable references will allow you to fly up the hills without effort!

FRAME WITH EXCLUSIVE POWERTUBE INTEGRATION
On all Xroad we use a compact frame with full integration of the Bosch PowerTube battery. This concept enables an Open version with an even lower and easier step over design. The frame conception in triple cavity Aluminium 6061 offers even better stiffness.

THE DETAILS THAT COUNT!
Equipped with a luggage rack, compatible with the QL3 and MIK standards means you can attach accessories in one click. Fast and easy!!! The full range of the Samedi 27 Xroad also benefits from a chainguard, even the full-suspension! Mobie forks equipped on Xroad 5 and FS 5 offering incredible comfort. Whether you’re getting up onto the pavement or tackling obstacle after obstacle off-road, it’s a real flying carpet!

A FULL-SUSPENSION FRAME FOR THE XROAD FS
Long trips, daily commutes, bumpy fire trails or long climbs – every trip has its own unique challenges. Our Xroad full-suspension concept encourages you to experience the known afresh and discover the unknown!

DIMANCHE 28
ERoad

Open horizons and mind
As in a dream

Who has never dreamed of replacing suffering with pleasure? Who has never dreamed of linking up Tour de France cols with the look of a pro rider? Who has never dreamed of multiplying their rides, and the kilometers, day after day. The Dimanche 28 has been designed for all those who want to pass from dream to reality!

BREAK THE RULES

The Dimanche 28 has been designed for everyone who wants to go faster, harder, more often, longer, whilst having fun! Some are looking for suffering in the effort, others for fun. If you are one of these, Dimanche 28 is made for you. Because the efforts that you will make, certainly as much as on your usual road bike, will always be well supported by the Bosch Active Line plus motor, so efficient and discrete. Thanks to the specific e-road program, you will get the feeling of riding with the legs of a pro rider and you can therefore multiply your rides and increase the percentages!

HIGH PERFORMANCE!

We wanted the Dimanche 28 to be high performance, agile and fun, so we endowed it with a high end Aluminum frame, using our variable thickness hydroformed tubes and lowered the center of gravity as much as possible thanks to our Hidden Power concept. We wanted it to be comfortable, so we designed an all-round and yet lightweight to obtain flex and absorb vibrations. We wanted it to be very light! So we designed wide chainstays to pass the power of your legs and the motor nonchalantly! We wanted it to be versatile, so we made mounts for luggage racks and mud guards and left the space to mount tires of up to 700x42!

IT WILL ACCOMPANY YOU DISCREETLY

Discrete and fiendishly efficient with the Bosch Active Line Plus motor, above all with the specific eRoad program! Capable of increasing your effort up to the very highest pedal cadences, it multiplies your capacities tenfold and your feelings in an extremely natural and silent manner. Lightweight, it delivers up to 50Nm of torque and 600W of maximum power and can produce up to 240% of your effort if necessary. Powered by a 500Wh battery, and consuming very little, it enables you to do almost endless rides! Your turn to do the étape du Tour or the Mont Ventoux!

A MONTH OF SUNDAYS

The Dimanche 28 is a true road bike, equipped as one! The windance geometry is partnered with a short stem and ergonomic handlebar. This has a short drop and reach offering a more balanced and comfortable position. Comfort is completed by the 32 mm tires that filter out vibrations as much as possible and a Selle Royal Vivo saddle with carefully thought out ergonomics. Ideal for long rides in perfect harmony.

UP TO THE TASK!

The dual chainring Shimano drivetrain in 10 or 115 offers you a large gear ratio so nothing needs to be refused, even the most extreme percentages. And if it climbs strongly, it can descend just as strongly, but the hydraulic Shimano disc brakes equipped with 160 mm discs offer total control and will know how to slow the rhythm in full safety! With the Dimanche 28, your only limits are those you place on yourself.

NOTHING TO LOoose

Watts, there are plenty on the Dimanche 28, but that’s not a reason to waste them! It’s the reason for which we have equipped it with high performance wheels! Deep rims in Aluminium or Carbon, turning on cartridge bearing hubs and shooed with 32mm line to more efficiently absorb the irregularities of the terrain. It’s going to ride strong and long!

EVERY DAY.

DISCOVER.
Vary the fun
You want tarmac or you want dirt? You want gentle rides or you want action? You want calm or you want crazy? You want your routine or you want adventure?? There’s only one response: OK for everything on a Dimanche 29!

VERSATILE!
If you’re like us, and you like road and trail, you’ll love our Dimanche 29! Pass from one to the other without constraints! Link riding up cols on tarmac with descending on a fun trail; the week on urban roads gives way to a weekend of discovery. Free your creativity and revisit your journeys as you see fit! It’s for all this, that we thought up the Dimanche 29.

WELL-FRAMED!
The Dimanche 29, we wanted it to be agile and fun, so we endowed it with a high-end Aluminum frame and lowered the center of gravity as much as possible thanks to our Hidden Power concept. We wanted it to be versatile, so we left the space to mount tires up to 700x50! We wanted it to be comfortable, so we designed a carbon fork and seatstays to obtain flex and absorb vibrations. We wanted it to be light! So we designed wide chainstays to pass on the power of your legs and the motor nonchalantly!

IT KNOWS HOW TO BE FORGOTTEN!
Let’s speak about the motor! So fluid and quiet that we’d almost forget about it… but it is there, with its 65Nm of torque! It will even deliver 3 times your power, and this up to 600W with an incredible suppleness and control ideal on technical and steep trails. But on the road and above 25 km/h, it knows how to make itself forgotten by its silence and the absence of friction! A delight!

IT DOESN’T LACK AIR!
At Moustache, we like large volume tires! Our Dimanche 29 is not the exception to the rule. With its 700x50 Maxxis, supple and lightweight, it floats over obstacles instead of banging into them. A treat of comfort and efficiency. Our specific alu rims with a wide profile improve the tire’s stability and the air flow for even better performance. As the motor is on the frame… it is easy to change your wheels to suit the conditions.

PROGRESSIVE
The Dimanche 29 is always ready! Ready for adventure and « bike packing ». The frame and the fork are compatible with our tubular mudguards and luggage racks (with tires that are 700x42 max) and the several bottle holder mounts allow you to ride self-sufficiently!

OFF

Climb, descend, turn, have fun, or just ride contemplating nature. The perfect plan for your ride today, tomorrow, the day after...

EVERY DAY.

RIDE.
OFF (road): to get off the beaten track!

OFF is a family brimming with personality! Let’s start with the turbulent Samedi 26 OFF. It will keep your children entertained, whether they are well-behaved or not, on family trips where an open mind is the order of the day! The Samedi 27 OFF 2 has two frame versions, standard and «Open», in order to open access even wider so more people can discover the joy of riding as a family. As for the Samedi 27 OFF 4, also available in two versions, it is more sporty and muscular with its Bosch Performance Line CX motor, its plus tires, and it’s high-performance suspension. Lets finish with the rebel of the family, the Samedi 26 FAT 4 which refuses to be pigeonholed, and its only objective is to explore the world, whether it’s icy or hot terrain!

MORE ACCESSIBLE THAN EVER
With the Samedi 26 OFF, the Samedi 26 FAT 4, and two models with an «Open» frame, otherwise known as low stand-over, the OFF family is more open than ever! Open to the largest number, to all riding types, gentle family outings or more sporty rides. Open to the world like our Samedi 26 FAT 4. Open to your wildest dreams to give you the greatest enjoyment!

EPOWERED BY BOSCH
Specifying a motor that’s adapted to the intended use is for us both self-evident and our priority. It’s why you will find the 50Nm Active Plus motor on the Samedi 26 OFF, that’s so well adapted to children and lighter riders. Next up it’s the incredibly natural feeling Performance Line with 65Nm, which gives a smile to the Samedi 27 OFF 2 and Open. Finally it’s all the power behind the 85Nm torque of the Performance Line CX that pushes forward the Samedi 27 OFF 4 and Samedi 26 FAT 4: 3 motors, 3 personalities, the same faultless reliability!

DEDICATED PARTS
Our frames are the souls of our bikes! But the parts are also important characteristics. This is why they have been developed by our teams or carefully selected from our partners to make a coherent whole! The wheels are the perfect example: exclusive Moustache rims and Maxxis tires work together to ensure the very best riding fun and safety. Our ergonomic saddles also know how to look after sensitive areas very well.

MORE ACCESSIBLE THAN EVER!
With the Samedi 26 OFF, the Samedi 26 FAT 4, and two models with an «Open» frame, otherwise known as low stand-over, the OFF family is more open than ever! Open to the largest number, to all riding types, gentle family outings or more sporty rides. Open to the world like our Samedi 26 FAT 4. Open to your wildest dreams to give you the greatest enjoyment!

EPOWERED BY BOSCH
Specifying a motor that’s adapted to the intended use is for us both self-evident and our priority. It’s why you will find the 50Nm Active Plus motor on the Samedi 26 OFF, that’s so well adapted to children and lighter riders. Next up it’s the incredibly natural feeling Performance Line with 65Nm, which gives a smile to the Samedi 27 OFF 2 and Open. Finally it’s all the power behind the 85Nm torque of the Performance Line CX that pushes forward the Samedi 27 OFF 4 and Samedi 26 FAT 4: 3 motors, 3 personalities, the same faultless reliability!

DEDICATED PARTS
Our frames are the souls of our bikes! But the parts are also important characteristics. This is why they have been developed by our teams or carefully selected from our partners to make a coherent whole! The wheels are the perfect example: exclusive Moustache rims and Maxxis tires work together to ensure the very best riding fun and safety. Our ergonomic saddles also know how to look after sensitive areas very well.
samedi 26

Certainly one of the best examples of the open mind of which we often speak to you about! What pleasure to ride together as a family!

EVERY DAY.

DREAM.
Samedi 27 Wide opens your horizons!

"The mind is like a parachute, it only works if it is open." Opening the usage of a bike, a wider vision, is the sense of our Wide family and the DNA of Moustache from the very first day.

RIDE, HAVE FUN, TAKE PLEASURE!

This bike has been conceived to make you want to ride or get back into riding, and enjoy it, whatever your riding style. Designed to make MTB easier, it has a high and frame using the technology from our Trial and Game families, but equipped with suspension and accessories that prioritize comfort and ease of use. All you need to do is tum the pedals to feel the power of the Bosch Performance CX motor that accompanies you! Magic!!

NICE FRAME! WE COULD DISPLAY IT ON THE WALL, BUT WE DESIGNED IT TO BE RIDDEN ;)

The frame is made from hydroformed Aluminum 6061 T4, and aeronautical quality T6, and discreetly integrates the Bosch battery while lowering the center of gravity, to offer greater stability! The linkage is CNC forged and machined, and the bearings are oversized for optimized stiffness and reliability. For the same reasons, all the tubes are of variable thickness and reinforced in the zones under stress. The geometry prioritizes liveliness and ease of use. The progressive suspension kinematics, anti-kickback, and anti-front wheel lift are optimized to ensure maximum comfort. And in order to achieve the very best look, the double Tig welds are polished everywhere it’s possible.

IT’S IN PART THANKS TO HIM THAT YOUR RIDES BECOME SO MUCH FUN!

The powerful Bosch Performance Line CX motor, the reference for e-bike motors, has evolved again this year with torque up to 85Nm on an even wider range in optimized eMTB mode; and the “extended boost” function to overcome roots, steps and rocks even in the most difficult climbs. Compact and lightweight, it stands out from others with its minimal resistance when pedalling, and incredible liveliness and dynamism thanks to its extreme reactivity.

A MAGIC SHOCK!

It’s so complicated to speak about it simply, as our Moustache shock is stuffed with exclusive technologies! We can just tell you that it has been developed not only to absorb all the bumps to give you superior comfort, all while offering increased security through its better grip for the wheels, but its dynamic rebound control system also enables the bike to keep its front wheel on the ground in the steepest climbs. Too good! And to make your life easier, it is simple to adjust thanks to its «Sag» indicator!

TO SERVE YOU!

The Samedi 27 Wide is equipped with a Shimano 11 or 12 speed drivetrain with a wide range so you can climb up the walls, or almost ;) and progressive powerful brakes for maximum control. Its handlebar is wide, but not too much, to offer stability, agility and an ease of use. The ergonomic Moustache saddle offers double density padding and a flexible cover for optimized comfort, and a dropper seatpost which allows you to instantly vary the saddle height, an incredible advantage when tackling a steep descent or simply wanting to easily plant your feet on the ground.

When we like something, we don’t count, especially not kilometers!

Who has not dreamed of getting in the saddle on a Saturday morning and riding up to Sunday evening, without posing a question, without missing a thing, with bags bundled up, and without having to recharge the battery?

EXPLORE THE UNKNOWN FOR A WEEKEND!
The Weekend, it’s the bike that we like to ride again and again, who wants to go further, higher, to explore the unknown without limit or almost, thanks to its double battery offering a total of 1125Wh. Available with or without equipment; with mudguards, luggage racks, and Supernova ultra powerful lights, so that nothing can stop you, bad conditions or nightfall!

UNKNOWN? NOT EXACTLY!
Let yourself be guided by the connected NYON computer. From the portal or the eBike Connect application, it enables you to easily plan your routes, then adjust the level of assistance in real time depending on the climbing coming up. Amazing! Thanks to it you can even personalize your riding modes and get data on your performance levels. What incredible functionalities!

THE SPACE FOR 2 BATTERIES!
For this DualBattery version, we modified the frame by replacing the top tube tube with a new variation, offering the necessary space to house an extra 500Wh! Thanks to this modification and the optimization of the center of gravity and the steering angle, the feeling is both dynamic and precise, even with an extra battery!

A REAL EE-MTB.......
The chassis is optimized to offer 120mm of travel on the rear and 130 on the front. It’s our own Magic Grip Control shock that is in charge of smoothing the terrain and keeping your wheels on the ground! Grip, comfort and preventing unwanted front wheel lift, that’s its domain! The new RockShox 35 Silver fork, as well as its exemplary performance, now offers the possibility to fix an encircling mudguard, for maximum protection.

IT’S A GAME OF PARTS
What pleasure to stay dry during a ride! The mudguard and luggage racks in the EQ version work together to keep you and your things dry thanks to our waterproof panniers (an extra option). Easy to mount and dismount with a simple click, thanks to the QL3 system. The platform is also MX compatible in order to charge your mule even further and leave for adventure.

Smile, smile again....

...at every turn, every jump, every push forward, every climb, every descent! On an easy ride or on the attack, flat out and fast. With your family, alone or with friends, there's no better bike than the Samedi 29 Trail to illustrate our «Smiling Machine»!

EVEN MORE MAGIC!
The Moustache spirit concentrated in just one model!
The Samedi 29 Trail! Thanks to its balanced geometry and our exclusive suspension kinematics, it is as at ease climbing as it is descending, as stable as it is manoeuvrable, as fun as it is efficient. Put simply, the DNA of the Trail family... which is improved even more this year with the adoption of 29" wheels. Its hydroformed frame integrates the Bosch battery. The same, or almost... just even more magic!

THE SOUL OF OUR SAMEDI 29 TRAIL
The frame is made from hydroformed Aluminium 6061 T4, and aeronautical quality T6, and discretely integrates the Bosch battery, while optimising the center of gravity, our special know how for several years! The linkage is CNC forged and machined, and the bearings are oversized for optimized stiffness and reliability. For the same reasons, all the tubes are of variable thickness and reinforced in the zones under stress, and in order to achieve the very best look, the double TIG welds are polished everywhere it's possible. With 150mm of travel, it offers the perfect balance between performance and ease of use.

IT STICKS LIKE VELCRO....
Our years of riding e-Bikes and the thousands of kilometers covered have driven us to develop our own, now legendary rear shock, the Moustache Magic Grip Control with unique characteristics! Our dynamic rebound control technology enables us to marry comfort and an exceptional grip with a unique control against front wheel lift when climbing. Your Trail will be easy to control and will enable you to push past your limits with ease. It offers 150mm of travel and 2 positions, open or «platform» to further increase control in the most extreme climbs.

THE WHEEL TURNS
And it turns quickly, around our own 29" 6061E Aluminum rims. They are asymmetric for the best distribution of spoke tension. The profile is specific and the joint is welded for optimal strength! They are equipped with Maxxis Assegai tires, our preference, in WT version, specially designed for wide rims! This means the tire does not bend on the rim and the knobs are in the optimal position for a level of grip... to blow you away!!!

WE LOVE THE EXTRA PUSH IT GIVES US!
The powerful Bosch Performance Line CX motor, the reference for e-bike motors, has evolved again this year with torque up to 85Nm on an even wider range, in optimised eMTB mode, and the extended boost function to overcome roots, steps and rocks even in the most difficult climbs. Compact and lightweight, it stands out from others with its minimal resistance when pedalling, and incredible liveliness and dynamism thanks to its extreme reactiveness. UNEQUIVALENT PERFORMANCE!
The new FOX 36 fork which equips the range from the Trail 6 up offers monster performance! Its scope for fine-tuning, its sensitivity, the precision and the grip reach levels as yet unseen for a standard build fork. With its e-bike-specific cartridge, it offers additional comfort and ease for a perfect match with our Magic Grip Control shock. These two get on famously!

EVERY DAY.
ATTACK.
It never stops!

The perfect way to sum up our Samedi 29 Game! The faster the speed, the steeper the slope, the more difficult the terrain, the more it will be in its element thanks to the high performance suspension that glosses over everything! But it also knows how to ride cool ;-{D

TO BEAT THE FIELD ON AN ENDURO, OR SIMPLY RIDE FLAT OUT ON ANY BEAT-UP TRAIL, WHETHER YOU’RE CLIMBING OR DESCENDING!

The Samedi 29 Game comes from our experience and our victories in competition in the hands of our champions (Jérôme, Julien, Kenny, Chris, Thomas, Maxime...). Designed to beat the field in an enduro special stage, it benefits from the precious feedback of our riders! With specially adapted parts, its 750mm handlebar, its 50mm stem and the KS telescopic seatpost, you have the perfect tool to aim for the podium on your next Enduro or simply enjoy your favourite trail!

THE KEY TO THE GAME!

The frame is made from hydroformed Aluminum 6061 T4, and aerodynamically quality Ti and discreetly integrates the Bosch battery, whilst optimizing the center of gravity, our expertise for years! The linkage is CNC machined, and the bearings are oversized for optimal stiffness and reliability. For the same reason all the tubes are of variable thickness and reinforced in the zones subject to most force, its geometry is designed for the best stability in the toughest descents. The progressive suspension kinematics, reduced pedal kickback and incredibly efficient anti-front wheel raise offer 160mm of travel! And to finish it off nicely, the double TiG welds are polished everywhere that it's possible.

UNPRECEDEDENT PERFORMANCE!

The new FOX 38 fork which equips the range from the Game 6 up is a monster! Its scope for fine-tuning, its sensitivity, the precision and the grip reach levels as yet unseen for a standard build fork. With its new hydraulic technology, it makes the ideal companion for our Magic Grip Control shock to push the limits of grip. These two get on famously!

TO STOP THE BEAST!

Our choice was consistently for the 4 piston Shimano brakes with 203mm discs front and rear. It is the XT M8120 which take care of controlling the Game 8 and 10 and the new M6120 which try to hold back the Game 4 and 6. These new brakes offer a build and performance of XT! Incredible ergonomy, power and modulation!

EVERY DAY.

SHARE.
Sharing your passion, your emotions, sharing a moment, a new discovery, a trip, a nice area, simply sharing a moment of fun... The Samedi 27 X2 is a unique way to double the fun! And as it always sees double... it exists in 2 versions, MTB or touring, 2X more possibilities!

WE CAN COUNT ON IT!

The Samedi 27 X2 is based around a very stiff frame offering maximum precision and safety. It is made from a 6061 T4 T6 Aluminum and uses triple cavity extruded tubes as well as hydroformed chain stays. Sufficiently long to be comfortable for both rider and passenger, but not too long so it stays as agile as possible in tight turns. A Moustache innovation, the motor has a rear central position to synchronize the cranks and offer the true feel of a tandem. Samedi 27 X2 is now compatible with Bosch Performance CX G4 motors via the specific Moustache adaptors!

POWER 2!

Or even power 4! Let’s not forget the Bosch Performance CX motor, its 85Nm of torque and its 600W of max power! Thanks to its incredible performance and the synchronized cranks we can say that you’ll be 4 making it go forward together. There’s nothing like this to preserve energy and lengthen rides or go on the attack on the steepest climbs.

WORTH LIMIT!

Whether you’re riding as a couple, a family, with friends, there is no limit to happiness behind the bars of the Samedi 27 X2. Thanks to the two batteries with a total of 1000Wh capacity offering you an incredible autonomy. 2X further!

CONNECTED AND ALWAYS IN THE RIGHT DIRECTION!

The new navigation function on the Kiox, activated on the smartphone that’s connected by Bluetooth, will help you discover unknown ground. The planned route will be shown on the screen with a line indicating the route to follow. Plan your routes in a flash with the eBike Connect App or the online portal. It then simply needs to be sent to Kiox via the application. Thanks to the connection with Komoot or Outdooractive, it is also possible to discover many other routes nearby.

EVERY DAY.

LEARN.
The balance bike...
It’s magic!

Mercred’12 is a bit of a special project: it was born by accident… but with the Moustache we designed it for our own satisfaction, but also for our children. An iconic model since the beginning of the brand, that continues to generate our kid’s first smiles on a bicycle 😉

It’s all about balance!
It’s the only Moustache bike without electric pedal assistance, but it might be the most important one in our collection: it’s a bike to begin riding that will give young riders the desire to continue. It’s a bike without compromises, that uses the same technologies as high-end adult models.

Mercred’12 is designed to teach kids how to maintain balance on a bike. It’s reassuring for children, because they can control their balance and speed with their feet. This will allow them to progress rapidly, and within a few short months you’ll see your child pushing off and lifting up his or her feet more and more often and for longer periods of time. And when he or she is finally old enough for a bike with pedals, you won’t need training wheels.

Ergonomic footrest:
More fun and balance!

Saddle height adjustable from 34.5 to 41cm from the ground. Suitable from approximately 20 months to 4 years. Available in two colours.
Weight: 3.5 kg.
EVERY DAY.
